

Case Study: H&H Foradory Construction, Inc.

"We've used other companies in the past, but we always come back to Texas Disposal Systems because it's better to work with the company you can depend on."

- Henry A. Foradory | CEO/Founder of H&H Construction, Inc.

MORE THAN THREE DECADES OF SUCCESSFUL PARTNERSHIP

Thanks to three decades of quality work, H&H Foradory Construction Inc. is a trusted name in site clearing, construction clean-up and demolition services throughout the greater Central Texas region.

As the company expanded from a small family business to a large corporation, it needed assistance to responsibly dispose of and process solid waste from job sites. With a significant amount of construction waste such as drywall, lumber, brush, and demolition debris at their job sites, H&H has required a partner skilled in resource management and roll-off dumpster services.

That's why H&H has relied on TDS for more than 35 years. Citing reliability, cost effectiveness and a commitment to top-end customer service, H&H has partnered with TDS to handle nearly all waste services at their job sites. Through the partnership, H&H has been able to expand their business while providing customers high-end service and unmatched standards.

SIMILAR STANDARDS OF BUSINESS

"The standards TDS provides are the same standards we have to supply to our customers," said Henry A. Foradory, founder and owner of H&H. "Their standards really stand up for us."

Those standards are why H&H has collaborated with TDS for multiple generations. Henry's sons, Hank and John, serve as project managers for H&H, and said they couldn't imagine working without a TDS partnership.

"The qualities of TDS nails down why you come back as a repeat customer," said John Foradory, citing factors such as TDS' customer care team and service reliability. "They make a huge difference."

With multiple generations involved in the business and a long history of quality service, the partnership is set to last for years to come.
